

Thermoplastic moulding compositions having improved mechanical properties

Abstract

The present invention relates to homo- and/or co-polymers that contain ≤ 100 ppm of coarse portions having a particle diameter of from 200 to 500 μm , to thermoplastic moulding compositions containing these homo- and/or co-polymers, and to the use of the homo- and/or co-polymers and of the moulding compositions for the production of moulded bodies, and to the moulded bodies themselves.
